

## Neje Base Plate Identification

### Acrylic Sandwich

Laser side and jig mount point is the left hand side of this image.

### Solid Acrylic

Laser side and jig mount point is the left hand side of this image. Note the top left screw is closer to the edge of the acrylic.

The plate below appears to be from a Neje clone that doesn't have an adjustable laser focal point and is unsuitable for a jig. Had a few reports of these sold on ebay as Neje Master Engravers but they are not.
