

## Assembly Instructions for the Endy250 Rotary

Thank you for purchasing one of my Rotary Jigs, a few simple steps to assemble this one ;-)

<p>Remove the nut and washer from the aluminium extrusion.</p>	
<p>Push the extrusion into the slot on the front of the headstock. This is intentionally a very tight fit. Give it a good wiggle – it will go!!</p>	
<p>Insert the bolt and washer through the hole on the rear of the headstock into the extrusion. Tighten the bolt.</p> <p>Torque setting: Somewhere between 'Finger Tight' and 'Reasonably Tight'</p>	
<p>The axle with the nut can now be fitted to the headstock.</p> <p>See the Quick Start for usage instructions.</p>
