

xTool Diode Laser Engraver Legs for the xTool D1 Pro

A set of 4 legs to raise your engraver up to around 280mm for engraving taller items or lifting the engraver over a rotary device.

Kit Contents

4 x 300mm legs with attached feet.

4 x D1 Pro Adapters

4 x Bolts

Installation

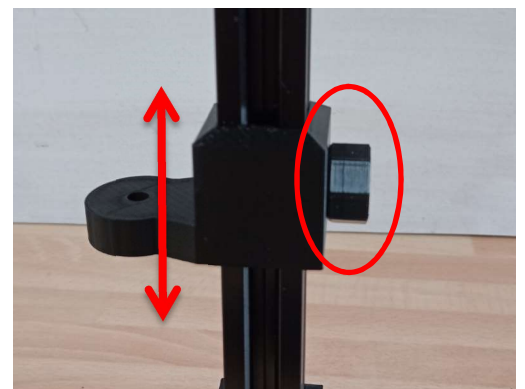

Remove the rubber bungs from the 4 stubby feet on the engraver.

Screw one of the supplied adapters into each foot.

Attach the leg to the adapter using the supplied bolt. Probably best done with the leg at its lowest setting. (Photo of leg attached to the D1 Pro to follow 😊)

Adjust the height of each leg by loosening the locknut on the side of the bracket and sliding up or down.
